...and a sneak peek of what's coming next 👁️

Application owner

- **Problem:** We have a lot of Enterprise apps. Who “owns” them?
- **Why we built it:** Give business application owners insights and ability to take responsibility, without depending on IT for every answer.
- **Outcome:** Cost, security, usage, and assessments in one view. Act, delegate, or mute.

LET'S DEMO:

AI license recommender for unused premium licenses

- **Problem:** Premium add-on licenses get assigned and never used. Costs auto-renew silently.
- **Why we built it:** Flag unused premium licenses with cost impact, before your next renewal.
- **Outcome:** AI identifies unused licenses. Filter by department, validate, reclaim.

LET'S DEMO:

Which premium licenses have no sign-in activity/usage, and what's the monthly potential saving?

Agenda

New Entra ID roles report

Intune drilldown report

...and a sneak peek of what's coming next 👁️

New Entra ID roles report

- **Problem:** No single view of who has privileged access and how they got it.
- **Why we built it:** Make every role assignment visible, including eligible roles from PIM.
- **Outcome:** All assignments in one report: permanent vs. eligible, direct vs. group-based.

LET'S DEMO:

How many Intune Admins do we have, and are any of them inactive?

Intune drilldown report

...and a sneak peek of what's coming next 👁️

Intune drilldown report

- **Problem:** Autopilot status lives in a separate tool from your device data.
- **Why we built it:** Bring enrollment readiness into the same view as everything else.
- **Outcome:** Enrollment state, group tag, UPN, and purchase order as columns.

LET'S DEMO:

Which devices are still pending enrollment, and what's their group tag?
